

```
WHERE facname = 'Basketball arena';
```

The screenshot shows the Oracle SQL Developer interface. The main window displays a SQL query in the 'Worksheet' tab:

```

1 SELECT location.locno, location.locname, facility.facname
2 FROM location
3 INNER JOIN facility
4 ON facility.facno = location.facno
5 WHERE facname = 'Basketball arena';
6

```

Below the query, the 'Script Output' tab shows the query results:

LOCNO	LOCNAME	FACNAME
L103	Locker room	Basketball arena
L105	Gate	Basketball arena

The status bar at the bottom indicates 'Line 6 Column 1', 'Insert', and 'Modified: Windows'.
